Attire: Summer Casual

together, we can
make this world a
better place...

The Feinstein Institute for Medical Research

The mission of The Feinstein Institute is to discover and understand the causes and underlying mechanisms of human disease; to effectively and rapidly translate this information into diagnostic and therapeutic solutions; and to promote the education of physicians, scientists, students and the community. This fall, The Feinstein Institute will proudly open the doors to its new 55,000-square-foot addition, making room for new and expanded programs in both basic science and clinical research.

The People Behind the Science

With a focus on curing human disease, the doctors and scientists of The Feinstein Institute work to bridge the gap between scientific discovery and patient care. The key to achieving significant advances in medicine – the kind of advances that truly change or save lives – is having the perfect blend of science and people, and cultivating a mind-set that encourages the exchange of creative ideas and experiences. This is the atmosphere at The Feinstein Institute: *where science meets the patient.*

National Grid

National Grid is an international electricity and gas company and one of the largest investor-owned energy companies in the world. National Grid recently acquired KeySpan and is now the second largest U.S. electricity and natural gas provider. National Grid U.S. is focused on the U.S. Northeast and continues to provide electricity and contract services to the Long Island Power Authority.
